Md. Rashid Tajware	2023200000220

Project Description

This project is a 3D Car Driving Game developed using OpenGL and C++. The game features a drivable car, environmental scenery, dynamic lighting, texture mapping, obstacle avoidance, coin collection, scoring system, and multiple camera views.

Code Contributions

Fuad Ahmed

- Vehicle rendering system
- Gameplay mechanics
- Obstacle spawning
- Coin collection system
- Collision detection
- Score and lives management
- Final project integration

Mst. Samsunnahar Shanta

- Texture loading system
- Texture generation and management
- Dynamic lighting system
- Material and visual enhancements

Md. Rashid Tajware

- Environment and scenery models
- Trees, houses, billboard and windmill models
- HUD implementation
- Keyboard controls

- Camera controls
 - User interface elements
-

GitHub Contributions

Fuad Ahmed

- Repository creation and configuration
- Git repository initialization
- Commit management
- Project asset management
- Final deployment to GitHub

Mst. Samsunnahar Shanta

- Authored commits related to texture management and lighting system

Md. Rashid Tajware

- Authored commits related to environment modeling and user interface implementation
-

Technologies Used

- C++
 - OpenGL
 - GLUT
 - stb_image
-
